FIRM CAPABILITY STATEMENT

Lidbury, Summers & Whiteman (previously trading as *Degotardi, Smith & Partners (Forster)*) are a long established local survey, Civil Engineering and Town Planning firm located in Forster Tuncurry.

Since its establishment in 1981, the firm has been an integral part of land development in the Great Lakes & Greater Taree local government areas. Consulting in surveying, planning and civil engineering, the firm has project managed such major projects as Seascape on Fig Tree Hill at Hallidays Point, Forster Palms Estate, Cape Hawke Estate & Banksia Gardens Estate.

Celebrating over 30 years in Business – Established 1981
Member of Great Lakes Sustainable Small Business Program
Liability limited by a scheme approved under Professional Standards Legislation

The Firm:

Lidbury, Summers & Whiteman are a multi disciplinary practice consisting of three Registered Surveyors, two Civil Engineers, survey technicians, draftsman, field hands and administration staff.

The firm offers a “one stop shop” service for the development industry, and are typically employed as the prime consultant undertaking subdivision planning, water sensitive urban design, engineering survey and cadastral survey, road and drainage design, water reticulation design, sewer reticulation design, project management and contract administration. We have performed this role for over 34 years in the Great Lakes and Greater Taree City Council areas.

We have also undertaken Road & Drainage design for both Local Councils and major sewer reticulation designs for Midcoast County Council. We have been involved in large community title development including significant input into Community Management Plans. Several large retirement villages and tourist developments have also utilised our firm’s service.

Our surveying section is heavily involved with building setouts, detail and contour surveys, land boundary and identification surveys, as well as strata and community title aspects. We have at our disposal three Total Stations and GPS equipment.

We are accredited by Midcoast Water for their electronic work-as-executed engineering drawings. We are also accredited in Urban and Rural Road and Drainage design and contract supervision, sewer mains design and contract supervision, onsite detention and drainage design by Association of Consulting Surveyors NSW and Institution of Surveyors NSW. We are also members of the highly respected national Stormwater Industry Association, Institute of Surveyors, Consulting Surveyors and Engineers Australia.

Other services we perform are Water Sensitive Urban Design (including music modelling), the preparation of Traffic Control Plans, Erosion and Sediment Control Plans and assessment and design of stormwater and onsite detention systems.

Lidbury, Summers & Whiteman have almost 70 years of experience in the development industry between the two partners alone, and have been established in the area for over 34 years (formerly Degotardi, Smith and Partners (Forster) (1981- 2004)).

With the north coast region becoming more accessible to metropolitan and regional centres along with the need to undertake ecologically sustainable development, Lidbury, Summers & Whiteman continues to meet the needs of its clients through innovative and environmentally sensitive design.

Lidbury, Summers & Whiteman were the Prime Consultant for Seascape on Figtree Hill development at Hallidays Point. This was one of the first major residential developments on the NSW North Coast that incorporated major stormwater quality treatment infrastructure coupled with flora and fauna preservation techniques.

As a result, this development won numerous awards, including the Urban Development Industry Association *Award for Excellence 'Best urban design in NSW Regions & ACT'*. This development has since become a model of how to balance the conflicting constraints of Council and Government bodies, community expectations, ecological issues and economic returns.
